NexABI

ADAPTIVE BUSINESS INTELLIGENCE

Estate agencies lose money in ways they cannot see.

NexABI finds it, tells them in plain English, and fixes it in one click.

Working product, not a mockup

Lagos first, Nigeria next

B2B SaaS · monthly subscription

THE PROBLEM

A mid-size agency leaks more each year than the software to stop it costs.

Take an agency closing **₦4B a year** with 18 agents — an ordinary Lekki or Ikoyi firm, not a giant. Here is what routinely goes missing, and none of it shows up on a P&L until the year is over:

Qualified leads that go cold nobody called them for a fortnight	₦180M
Ad spend on channels that never close discovered at the annual review, if at all	₦40M
Stock priced below its own demand nobody measures inquiries per available unit	₦95M
Recoverable in year one	**₦315M**

ASSUMPTION Illustrative model — swap the inputs for a real customer's figures in diligence

7.9%

of annual revenue, leaking quietly, in a business that already has all the data needed to spot it.

- NexABI costs **₦2.2M a year**. It has to recover **0.7%** of that leak to pay for itself.

WHY IT HASN'T BEEN SOLVED

Everyone has the data. Nobody looks across it.

Six systems, no seam

Sales in a spreadsheet. Leads in a CRM nobody updates. Payments in a second spreadsheet. Complaints in WhatsApp. Each one is fine alone. **The money is lost between them.**

Dashboards report, they don't decide

Power BI will tell you revenue fell. It will not tell you why, what to do, or whether it worked. **The hard part is left to the reader** — and the reader is busy selling.

Nobody has a data analyst

A 20-person agency will never hire one. So the insight that would have saved ₦180M is technically available and **practically invisible**.

- The gap is not reporting software. It is **the analyst nobody can afford** — the person who reads across everything each morning and says “call these 47 people today”.

THE SOLUTION

NexABI is that analyst, for ₦180,000 a month.

01

It reads everything

Sales, leads, properties, campaigns, payments and reviews — in one place, continuously.

02

It spots what's wrong

Money leaking, leads stalling, stock mispriced, clients going quiet — before it shows up in the numbers.

03

It says it in English

“47 leads worth ₦8.2B haven't been called in two weeks.” No charts to interpret, no training needed.

04

It fixes it

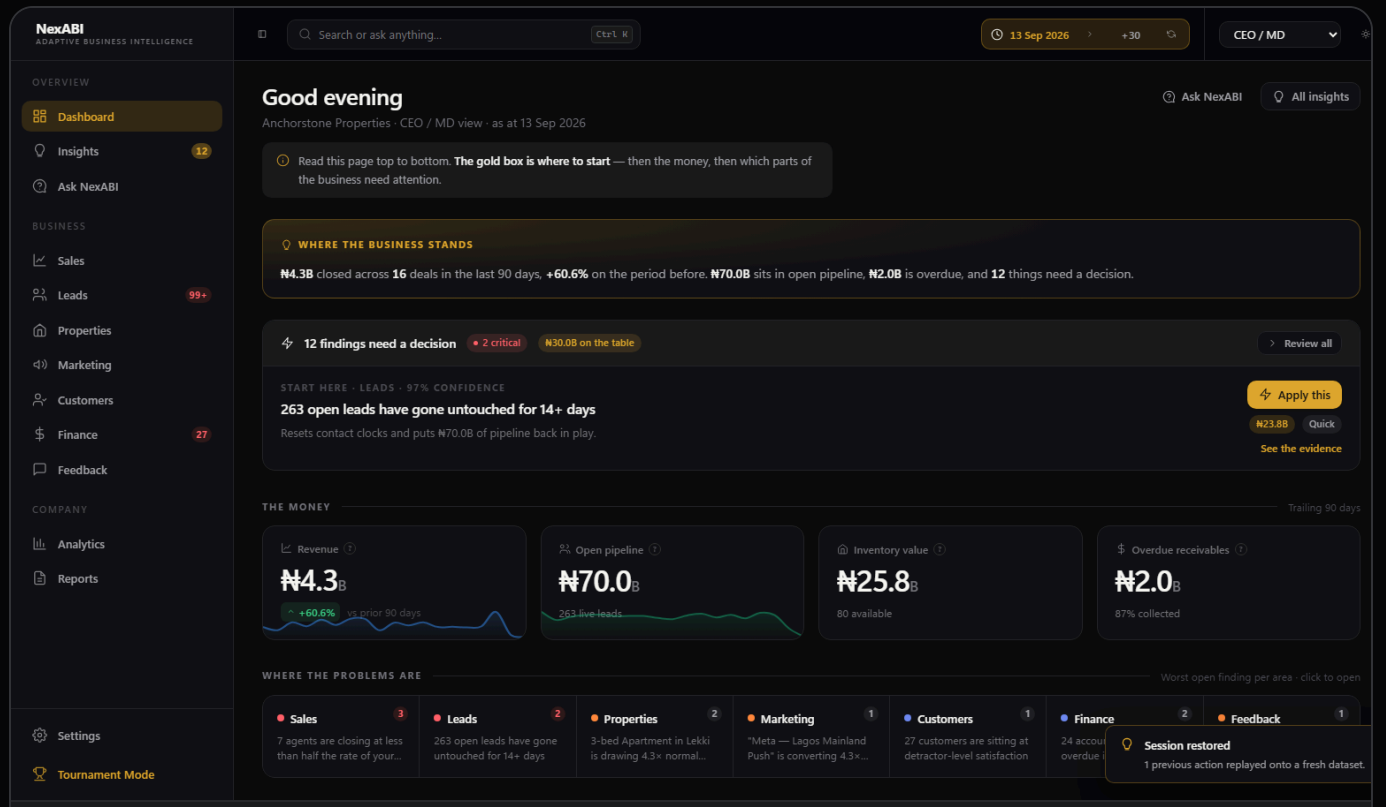

One button assigns the follow-ups, pauses the campaign, reprices the stock. Then it checks whether it worked.

- Step 4 is what nobody else does. **Every competitor stops at step 3** and hands the customer a chart.

It opens on the decision, not the dashboard.

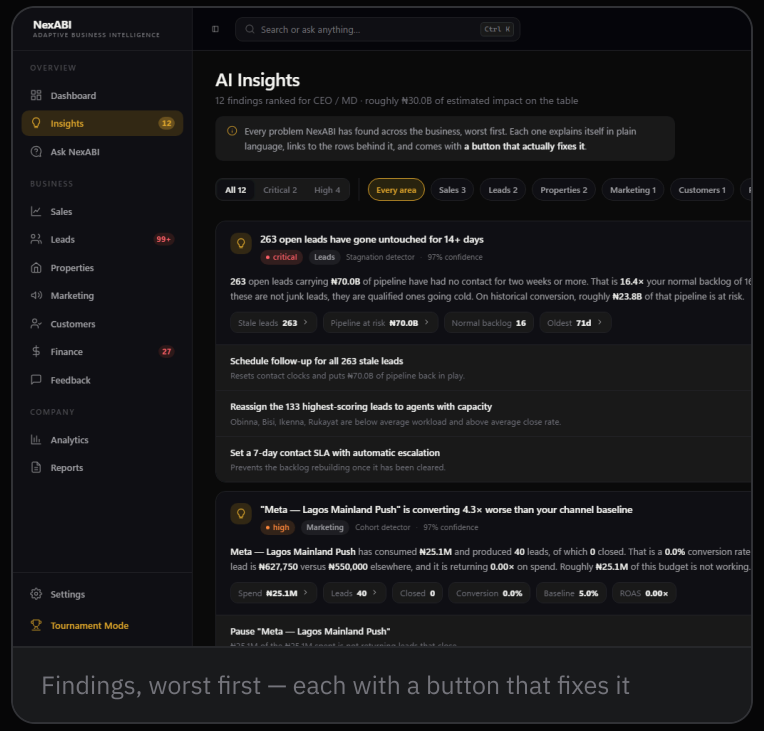

- **"Start here"** — the single most valuable thing to do today, with the button attached
- **Every figure is clickable** — one tap to the exact records behind it
- **Ask it anything** — "which sources send the best leads?" — and get a straight answer
- **Buyers get their own portal** — what they owe, when it's due, who to call

- An agency owner who has never opened a BI tool can use this on day one. **That is the design constraint**, not a nice-to-have.

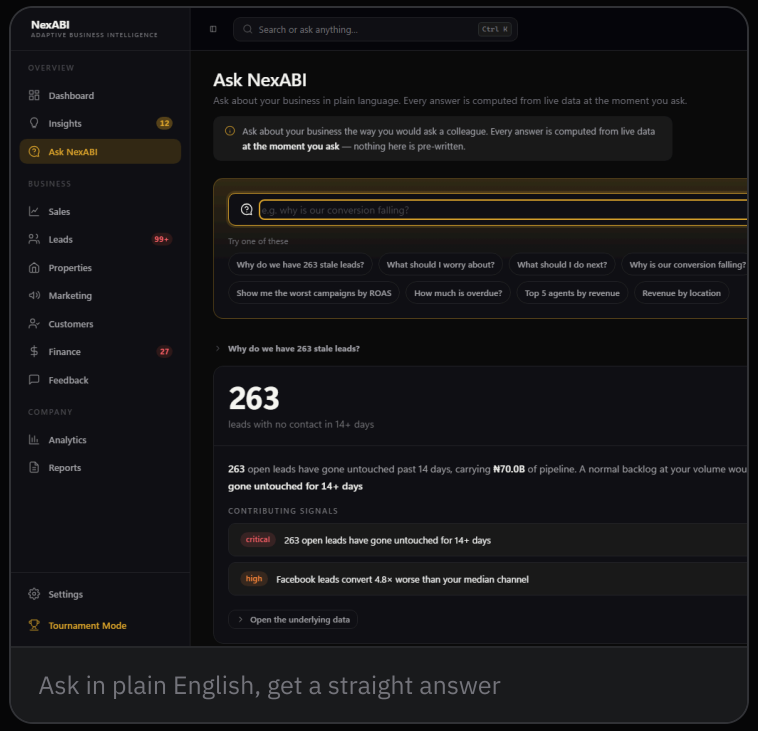

The working product — every number computed live from the customer's own data

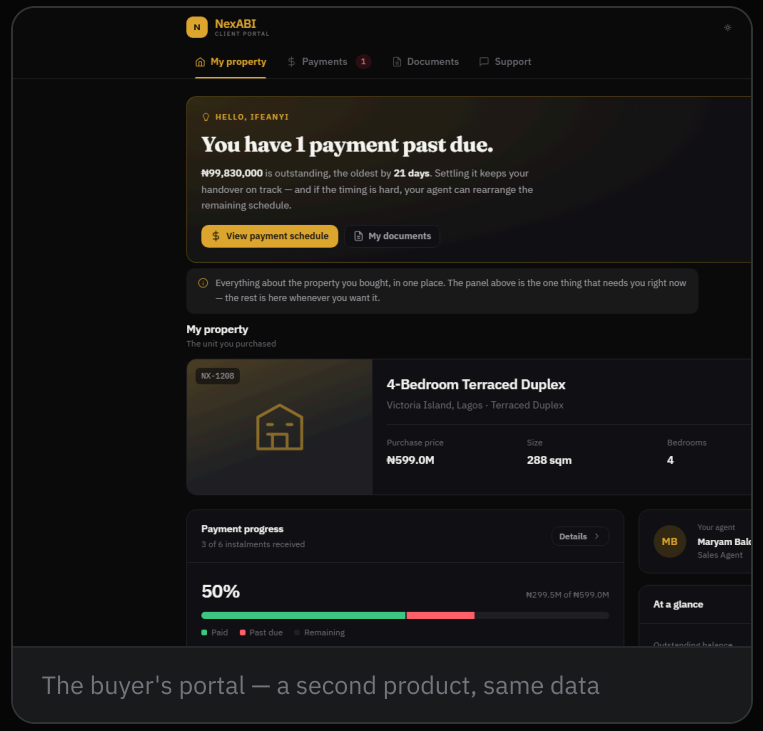

One product for the business. One for their buyer.

Findings, worst first — each with a button that fixes it

Ask in plain English, get a straight answer

The buyer's portal — a second product, same data

- The buyer portal is not a feature. It is **a second reason to renew** — once an agency's clients log in to check payments, switching costs jump.

COMPETITION

Everyone else sells storage or charts. We sell the decision.

	SPREADSHEETS	CRM Zoho, HubSpot	GENERIC BI Power BI, Tableau	NEXABI
Stores the data	Yes	Yes	Yes	**Yes**
Reads across every area	No	Leads only	Yes	**Yes**
Finds problems unprompted	No	No	You build the alert	**Yes**
Explains it in plain English	No	No	No	**Yes**
Fixes it in one click	No	No	No	**Yes**
Checks whether the fix worked	No	No	No	**Yes**
Needs an analyst to run it	—	—	Yes	**No**
Built for Nigerian property	No	No	No	**Yes**

Instalment plans, C of O timelines, naira pricing, WhatsApp-first agents. **A global tool will not build this for a market this size** — that window is the opportunity.

MARKET

Built bottom-up, so you can argue with every input.

Registered estate firms in Lagos	~5,000
× firms with 5+ agents (our floor) — 30%	
Serviceable, Lagos	1,500
× average ₦180,000/month × 12	
SAM — Lagos alone	**₦3.2B/yr**
Abuja, Port Harcourt, Ibadan & Ghana	≈ 2.1×
SAM — West Africa	**₦6.7B/yr**

ASSUMPTION Firm counts to be verified against LASRERA and REDAN registers

Why this market, now

Lagos mandated agency registration — for the first time there is a list of who our customers are and how to reach them.

Instalment selling is now the norm. That creates receivables, and receivables create the exact pain we solve.

Agencies already pay for software — listing portals, CRMs. The budget line exists; we are competing for it, not creating it.

- Capturing **3%** of Lagos alone is **₦96M ARR**. This does not need to be a category winner to be a real business.

BUSINESS MODEL

Monthly subscription, priced per agency, tiered by team size.

STARTER

₦75,000 /mo

Up to 5 agents

- Full intelligence layer
- Client portal
- CSV import
- Email support

GROWTH · MOST AGENCIES

₦180,000 /mo

Up to 20 agents

- Everything in Starter
- Role-based views
- Scheduled reports
- WhatsApp alerts
- Onboarding & data migration

ENTERPRISE

₦450,000 /mo

Unlimited agents

- Everything in Growth
- Multi-branch
- API & integrations
- Dedicated success manager

Annual prepay −15%

Improves cash and cuts churn in a market where monthly cards fail often.

Setup fee ₦250,000

Data migration. Covers onboarding cost and filters out tyre-kickers.

Expansion later

Per-seat agent app, and a transaction fee on payments collected through the portal.

UNIT ECONOMICS

The maths works at small numbers, which is the point.

Average contract value (blended)	₦180k/mo
Gross margin (hosting + support)	86%
Cost to acquire (direct sales, 2 demos)	₦420k
Payback period	**2.7 months**
Expected life (3% monthly churn)	33 months
Lifetime gross profit	₦5.1M
LTV : CAC	**12 : 1**

ASSUMPTION Churn and CAC are projections — the first 20 customers exist to prove or break them

Why churn should be low

It writes to their data. Follow-ups, reassignments and price changes made in NexABI are real records. Leaving means losing operating history, not just a login.

Their buyers use it too. Once clients check payments in the portal, switching means telling every customer to go somewhere else.

- Break-even at roughly **45 customers** — 3% of serviceable Lagos.

GO TO MARKET

Land the first 50 by showing them their own leak.

STEP 1

Free leak audit

They export a lead sheet, we import it live in the meeting. NexABI names the cold leads and the money attached. **This is the whole pitch.**

STEP 2

30-day pilot

One branch, real data, paid setup. Success is one number: **did the follow-up backlog fall?**

STEP 3

Expand inside the firm

Branch by branch, then the client portal, which pulls their buyers in and raises the switching cost.

STEP 4

Referral loop

Estate agencies are a small, talkative market. **One credible reference sells the next three.**

Channels that actually reach them

REDAN and LASRERA member lists · developer launch events · the estate-surveyor associations · WhatsApp broker groups. **Direct sales, not paid ads** — this is a market you walk into.

Why the audit converts

Most software demos show a product. Ours shows the prospect **their own money, sitting in their own spreadsheet, uncollected.** That is a different conversation.

WHERE WE ARE

The product is built and working. Not a prototype, not slides.

- ✓ **Two full products shipped** — the agency console and the buyer portal, 18 screens
- ✓ **The intelligence layer works end to end** — it finds problems, explains them, and the fix changes real records
- ✓ **Import your own data and it responds** — nothing is staged for the demo
- ✓ **91 automated tests, all passing** — this is engineered, not assembled

FILL BEFORE PRESENTING

Customer evidence

Any letters of intent, pilot agreements, waitlist signups, or named agencies who have seen a demo. Even **three agencies saying "yes if it does X"** changes this slide from a claim to a signal.

18
Screens live across two products

18
One-click fixes it can perform

91
Automated tests passing

0
Fake or hardcoded findings

- You can open it right now and break it. **That is unusual at this stage** and it is the strongest thing we have.

ROADMAP · NEXT 12 MONTHS

From working product to repeatable business.

Q1

Make it real

Backend, accounts, live data connectors for the CRMs and sheets agencies already use.

Milestone · **5 paying pilots**

Q2

Prove retention

WhatsApp alerts so findings reach people who never open a browser. Agent mobile view.

Milestone · **20 customers, churn under 4%**

Q3

Make selling repeatable

Two-person sales team, the leak audit productised, onboarding under a week.

Milestone · **50 customers · ₦108M ARR**

Q4

Expand

Abuja and Port Harcourt. Payments through the portal opens a transaction revenue line.

Milestone · **90 customers · break-even**

- The engine is already built and is portable by design — **Q1 is infrastructure, not invention.** That is why the first milestone is customers rather than features.

Who is building this.

THIS SLIDE IS YOURS — I CANNOT WRITE IT FOR YOU

Founders, and why you specifically

Investors back people before products at this stage. For each founder, answer in one line each:

1. **Name, role, and what you own** — product, engineering, sales
2. **Why you understand this market** — time spent in Nigerian property, or building for SMEs here
3. **What you have shipped before** — anything real that people used
4. **The unfair advantage** — a relationship, a dataset, a distribution channel others lack

- If there are gaps — no sales lead, no property insider — **name them and say who you are hiring with the money.** That reads as clarity, not weakness.

THE ASK

What we are raising, and what it buys.

SET THE NUMBER

₦____ for ___%

A pre-seed for this stage in Lagos typically lands between **₦40M and ₦120M**. Pick the number that funds 18 months to the milestone below — **not the biggest number you think you can get.**

- State the milestone the money reaches: **“50 paying customers and ₦108M ARR by Q3”**. An ask without a milestone attached is a number without a reason.

Illustrative allocation — adjust to your number:

- Weighted to **sales, not building**. The product exists — the risk now is distribution, and the money should go where the risk is.

WHY THIS WINS

Every agency already owns the data that would save them. Nobody has ever read it for them.

NexABI is the analyst a 20-person agency can finally afford — one that reads everything every morning, says what is wrong in plain English, fixes it, and then checks whether the fix worked.

₦3.2B
Serviceable market, Lagos alone

12:1
Projected LTV to CAC

45
Customers to break even
